# Doughchef 5-8

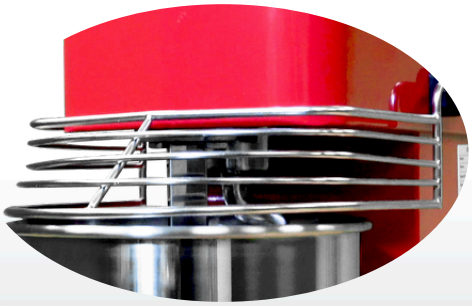

## Start-up

Place the machine on a stable, level surface. Plug the single-phase power plug into an electrical outlet, and the machine will switch on automatically.

## Step 1

Once the machine is switched on, you can proceed to the next step: opening the bowl.
On the Doughchef 5-8, the bowl is easily accessible. Simply lift the protective cover upwards, and you can then add the ingredients to the bowl.

Protective cover

## Step 2

Once the head is raised and the ingredients are in the bowl, we can move on to the different controls. Both the Doughchef 5 and 8 have three buttons located on the right side of the machine.
To start the machine, press the green button (button 1).
The ingredients in the bowl will then begin to mix.
To increase the rotation speed of the spiral, use the rotary knob (button 2). This allows you to adjust the speed of the machine.
Once your dough is ready, press the stop button (button 3) to stop the machine.

1. On
2. Speed
3. Stop

## Step 3

Is your dough ready? Open the protective cover and manually remove the dough from the bowl.
